9、Precautions in using the motor

马达使用注意事项:

(1) If silicon materials, which contain low molecular silicon compounds, adhere to the motor's commutator, brush or other parts, then upon rectification of the electric energy the silicon breaks down into SiO_2 , SiC and other constituents which produce a rapid increase in the contact resistance between the commutator and brush. Therefore great care should be taken when silicon material is used in a unit and check well at the same time that such binding agents or sealing materials are not generating gases of detrimental nature, whether used for motor mounting or applied during your product assemblies. Care must be taken for an optimum selection, especially when using those of cyanic adhesive and sulfur gas.

如果马达部品或周边环境和物体中含有 Si, S 等微量元素时可能造成换向器与电刷间阻抗增加, 即形成氧化物, 使之不通电。

(2) When mounting your motors by means of binding agents, DON'T allow any adherence to the bearings nor intrusion into the motors.

马达安装后不允许有包装粘结到轴承或异物落入马达内。

(3) Axial thrust on the output shaft could have an adverse effect on the motor life .i.e. As is produced by worm gears, fans, etc.

Check the service life expected under the actual operating conditions by testing the motors installed in your application products. For heavy thrust loads, consider using something mechanical to retain the shaft end.

当蜗杆, 风叶对马达轴有轴向猛推力时对马达寿命有影响, 应利用其它设施减少对马达轴向推拉力以保证其串量。

(4) There are occasions when the internal resistance of the motor driving power source (Which contains an electrical circuit) can influence the life span of the motor.

In instances where there is a low input of voltage to the motor, the internal resistance of the power source is large which may well result in an inferior motor after a short time, conversely in instances where high cyclic voltages are applied, this internal resistance is small and the motor life span is shortened. When the temperature deviates from the normal room temperature as is the case in low and high temperature situations, please note the conditions.

电源内阻偏大或偏小会导致马达运行不良或寿命减短, 另当温度高或低于室温情况下请记录环境温度。

(5) Motor life may be affected adversely by heavy radial load such as produced by rotating eccentric parts, etc., and also by vibration given from outside.

Do check over such negative factors by testing the motors to the actual operating conditions in your application products.

马达寿命在超负荷或非正常使用时所产生的不良结果, 我们不予确认。

(6) If when mounting the motor and assembling the unit, equipment which emits ultrasonic waves is used there is a danger that some of the internal parts of the motor might be damaged so please take care.

请注意马达组装后, 设备若发出超声波将对马达内部造成影响。

(7) DON'T store motors under environmental conditions of high temperature and extreme humidity. DON'T keep them also in an atmosphere where corrosive gas may be present, as it may result in malfunction.

勿将马达储藏放置在高温高湿有腐蚀性气体处。

(8) Ambient and operating temperatures exert an affect more or less on motor performance and life. Do pay particular attention the surroundings when it is hot and damp.

为防止工作环境的温度变化会影响到马达功能或寿命，所以当天气湿热时请特别注意。

(9) When press fitting a pulley , gear etc., onto the motor output shaft, always support the shaft at the other end or its retaining metal pad in a proper and correct way.

安装滑轮或齿轮时请给马达轴正确方式定位，应将马达轴另一端即端盖轴承室用铁块顶住。

(10) When soldering, BE SURE to finish your work quickly so as not to develop plastic deformation around the motor terminals nor to give them any forced bend or inward depression. In doing so, special care must be taken not to allow solder debris and flux to spatter into motors and precautionary measures should be taken if necessary, by covering up all the nearby holes and apertures. Any motors having snap-in terminals must also be attended carefully so as not to get flux in along the terminals, as it may cause failure in electrical conduction.

当焊接时时间勿太长，不要让围绕端子的塑料件变形或使端子弯曲，需保证不能让焊接碎屑或焊锡熔化物进入马达内部。不得已时，须将塑料件附近的孔径或缝隙掩盖。任何马达均需保证焊锡熔化物不得顺端子进入其内部，否则可能会引起马达电气故障。

(11) DON'T leave motor shaft locked while power is applied , as even a short-time lock-up may cause excess heat build up resulting damage to the motor depending on its specifications.

切勿在马达接通电源时当马达轴堵住，这样可能会使马达温度升高而产生火灾。

(12) Intensive pressure on the endbell boss might cause starting disability of motor. So please take care for motor mounting not to push endbell boss.

If the endbell boss must be pushed,the load should be put on the center of the boss.

Please ask us for the suitable value of the load.

强烈的挤压端盖轴承室可能会造成马达无法转动。所以请尽量不要推盖板轴承室。

如果轴承室无法避免要被推压，请将负荷加于轴承室中心位置。

必要时请预先通知我们做上述评估。

(13) Please do not touch motor bearing as otherwise bearing oil will be drawn out, which might cause bearing noise.

请勿触摸马达轴承，否则轴承油被吸干容易引起燥音。

(14) When motor more than three months did not be used for need to note oil for bearings and confirm afresh.

当马达库存超过三个月未被使用时需重新给轴承注油并确认。

(15) Fumigant and its gas may affect motor performance. Then, motors shall not be eaposed to fumigand and its gas, if fumigation shall be made for packaging material etc.

薰剂及其气体可能会影响马达正常运行。勿将马达暴露在薰剂或其气体中。如包装材料中可能含有薰剂。

(16) Identification marking drawn on motor housing with dyestuff marker may be blurred or may fade out when rubbing.

马达机壳上的捺印标识可能会慢慢褪色。
